TASK

Use API to retrieve and display
the current 5 day weather forecast.
from now & for a specific city

Goals:

1.- Responsive version
   - Bootstrap framework

2.- Feature to explore weather in other
   cities
      - Dropdown ?
      - Text box (auto complete)
   . what is the industry standards??
   Are the country populated from
   DB or API or Local?
   * Google API
      ➤ GET GOOGLE API KEY

FOR TIMING USE DROPDOWN STATIC VALUES

3.- Deploy assignment somewhere,
   include link for testo or download
   d

   - Read me page
   - Upload project in Git
   - Do we need a working
      App online?
